

## What is DMaaS?

### Data Management as a Service One Platform for All Your Healthcare Data

A single platform to integrate, analyze, cleanse and store your healthcare data.

A DMaaS platform is a cloud-based service that provides clinics, providers, healthcare organizations and health systems with centralized storage for the myriad disparate data sources involved in healthcare transactions today.

#### INTEGRATION ENGINE

- » Connect and share data with any EHR or data system.
- » Accelerate Implementations to 30 days by leveraging over 20 existing EMR integrations.
- » Utilize vendor neutral integration framework built using all IHE profiles and message types: FHIR, HL7v2, XML, CDA, X12, ANSI.
- » Easily add integrations with scalable maintenance models.

#### DATA WAREHOUSE

- » Cleanse & store data in HIPAA compliant data infrastructure.
- » Master Patient Index (MPI) applied for single consumer record.
- » Enable quick access to vital data from multiple silos.
- » Improve data quality & consistency with 100+ business rules.
- » Enables single source of truth for your healthcare data.

#### BUSINESS INTELLIGENCE

- » Track and monitor key performance indicators (KPIs).
- » Monitor Financial, Operational, Clinical, Productivity Performance.
- » Measure success against evidence base metrics.
- » Interactive dashboards with drill down capability.
- » Create your own reports, dashboards, and analytics.
- » Easily schedule and share reports with others.

#### APPLICATION INTERFACES

- » Healthcare organizations vary so providers need flexible & scalable solutions to meet their future needs.
- » Leverage Applications Program Interfaces (APIs) to utilize and exchange data with outside systems or EMRs.
- » Add modules: risk/care coordination, patient engagement capacity, wait list management, wearable devices, etc.
